Talented Microsoft .NET Developer

The successful applicant will take part in the design and development of new Flynet visualisation products in association with one the world's largest software companies. Working as part of a team, the successful candidate will code using top-end Microsoft development tools.

Product design and implementation are of the highest quality using WPF, WCF and MEF for deployment on site and in the cloud. The final products will be installed on thousands of servers and desktops around the world.

Flynet is looking for someone who can think creatively and is genuinely interested in the latest technologies.

Salary dependent on experience and skills.
