

Talented UI Designer (Microsoft WPF)

The successful applicant will take part in the user interface design and implementation for new Flynet visualisation products in association with one of the world's largest software companies. Working as part of a team, the successful candidate will code using top-end Microsoft development tools.

Product design and implementation are of the highest quality using WPF for deployment on site and in the cloud. There is much emphasis on the creation of a state-of-the-art WPF UI. The final products will be installed on thousands of servers and desktops around the world.

Flynet is looking for someone who can think creatively and is genuinely interested in the latest technologies.

Salary dependent on experience and skills.
